FB 2012-14

AFX EPDM Width Change to 4.5'

July 12, 2012

To: Carlisle SynTec Systems' Authorized Applicators

In order to better align its size with that of Carlisle's other membrane offerings, Carlisle's EPDM AFX membrane will now be manufactured in a 4.5' x 50' roll

With this change we will be able to reliably deliver a 4.5' wide roll. The 50' roll length is a standard within the company and will result in 25 more square feet per roll.

The small rolls of EPDM AFX are ideal for contractors who focus on small cut-up type projects in metropolitan areas due to the ease of maneuverability. The EPDM AFX can be used as a premium cap sheet in a multiple-ply assembly or as a standalone cap sheet to re-roof existing smooth BUR or Mod-Bit systems. Rolls featuring our 6" FAT can be installed in one of three ways: mechanically fastened, adhered with hot asphalt or adhered with Cold-Applied Adhesive.

The product codes affected by this change are listed below:

|        |            |                         |            |
|--------|------------|-------------------------|------------|
| 309789 | Sure-Seal  | 90-mil AFX with 3" FAT  | 4.5' x 50' |
| 309790 | Sure-Seal  | 105-mil AFX with 3" FAT | 4.5' x 50' |
| 315512 | Sure-Seal  | 105-mil AFX with 6" FAT | 4.5' x 50' |
| 318950 | Sure-White | 105-mil AFX with 6" FAT | 4.5' x 50' |

Please contact your Carlisle manufacturer's representative or distributor with any questions regarding the new EPDM AFX membrane sizes.

Sincerely,

Ronald L. Goodman
