Carlisle Announces Development of SecurShield HD EPS Composite

Carlisle PA – Carlisle SynTec Systems, a leading supplier of commercial roofing systems, is pleased to announce the development of SecurShield HD EPS Composite, the first composite insulation panel in the roofing industry that combines resilient and lightweight expanded polystyrene (EPS) with a ½" high-density polyiso cover board.

SecurShield HD EPS Composite features Carlisle's traditional EPS roofing insulation and SecurShield® HD polyiso cover board. This composite insulation panel is ideal for new construction or re-roofing applications where thermal efficiency and durability are required.

SecurShield HD EPS Composite eliminates separate installation of a cover board and provides material and labor savings on projects that require two layers of adhesive attachment. Fewer layers of adhesive and less handling translate to less labor and higher profits. It also offers improved resistance to high winds, boasting a FM SH-1 severe hail rating. SecurShield HD EPS Composite is available in thicknesses from 1.5" to 6" that achieve R-values ranging from 6.5 to 30.5 for single-layer applications.

About Carlisle SynTec Systems:

Carlisle SynTec Systems, headquartered in Carlisle, Pennsylvania, has been manufacturing single-ply membrane roofing systems for 50 years. Carlisle is a business segment of Carlisle Construction Materials Incorporated and has operations in over 20 North America locations. For more information, call 800.479.6832 or visit Carlisle's website at www.carlisesyntec.com.
